## Status report on the current situation 22.07.2021

Dear Customer,

we would like to give you a new update on the flooding of our plant in Wipperfuerth:

As already described, our buildings and facilities were flooded up to a height of 1.1m. After the flood waters receded, we were able to achieve that our IT systems are working again, our electroplating shop is mostly back in operation, individual machines are already productive and manual logistics processes are implemented.

This was only possible thanks to extraordinary support from external and internal helpers. FOR THIS WE WOULD LIKE TO SAY THANK YOU!

Rest assured that we continue to work 24/7 with these helpers to restore our full operational capability.

Despite the encouraging progress already made, we still have a marathon ahead of us. We are confident that we will be able to provide you with an even more positive outlook early next week.

Your regular VOSS contact persons are still available at any time and can be reached via the usual communication channels.

Kind regards

Dipl.-Ing. Christian Mertens
