Blanking screws

Type 80 N3

Ideal for the following systems:

- VOSS Ring<sup>M</sup>
- 2SVA
- ES-4
- BV-10
- ZAKO (Tube-OD S16–S38)

Type 90 Basic II

Ideal for the following systems:

- VOSS Ring<sup>M</sup>
- 2SVA
- ES-4
- ES-4VA
- BV-10
- ZAKO (Tube-OD S16–S38)

Type 90 Comfort

Ideal for the following systems:

- VOSS Ring<sup>M</sup>
- 2SVA
- ES-4
- ES-4VA
- BV-10
- ZAKO (Tube-OD S16–S38)

Type 85

Ideal for the following systems:

- ZAKO / ZAKO LP

VOSSForm 100

Ideal for the following systems:

- VOSSForm<sup>SQR</sup>
- VOSSForm<sup>SQR</sup> VA

VOSSForm 100 Compact

Ideal for the following systems:

- VOSSForm<sup>SQR</sup>
- VOSSForm<sup>SQR</sup> VA

## Important notes on VOSS assembly instructions

In order to ensure maximum performance and functional reliability of VOSS products, the respective assembly instructions, operating conditions and tube recommendations have to be adhered to.

We always recommend the use of VOSS pre-assembly devices and this is strongly recommended starting from tube sizes L18 / S16. It is absolutely essential to follow the operating instructions for the respective pre-assembly device used.

Do not start with assembly until you are absolutely sure that you have understood the operating and assembly instructions for each VOSS pre-assembly device or machine, tool and product. Incorrect handling leads to risks regarding safety and leak-tightness and can result in failure of the entire connection.

It is impossible for the manufacturer to monitor whether the user is adhering to the operating and assembly instructions for individual pre-assembly devices or machines, tools and products, as well as what conditions prevail and what methods are used for installation, operation, application and maintenance of the individual products. Improper workmanship can lead to material damage, which in turn may pose a danger to life and limb. This means that VOSS Fluid GmbH can accept no responsibility or liability for loss, damage or costs incurred due to faulty installation, improper operation or incorrect application and maintenance or from any related issue. Failure to heed this warning will lead to loss of guarantee.

VOSS Fluid GmbH reserves the right to make changes or additions to the information provided without prior notification. Customers can obtain the latest version of the operating and assembly instructions upon request, or from our download area at: [www.voss-fluid.net](http://www.voss-fluid.net)

## General notes on VOSS assembly instructions

Make sure that all components, including the tubes, are clean before assembly is started and that they remain clean during the entire assembly process. Soiled components may lead to failure of the system. Before starting assembly, make sure that you have carried out all preparatory work in accordance with the respective instructions.

### Specifications concerning permissible steel tubes:

seamless, cold-drawn and normalized precision steel tubes as specified in DIN EN 10305-4, material E235+N, mat. no. 1.0308+N or E355, mat. no. 1.0580. The tubes must be ordered by specifying the outer diameter and the inner diameter.

### Specifications concerning permissible stainless steel tubes:

seamless, cold-drawn and solution-annealed, scale-free stainless steel tubes in CFA or CFD delivery condition of dimensions and tolerances according to DIN EN 10305-1 and all other delivery conditions as specified in DIN EN 10216-5, material X6CrNiMoTi17-12-2, mat. no. 1.4571. The tubes must be ordered by specifying the outer diameter and the inner diameter.

The tubes should be prepared with the same thoroughness as pre-assembly and final assembly of the connection. Especially when using long tubes, check the end sections for damage or distortion. We recommend that pre-assembled tubes which are not to be finally assembled yet should be fitted with protective caps.

Marking a stroke on the union nut and the tube makes it easier to achieve the correct number of turns when tightening the coupling.

Before starting to assemble VOSS components with elastomer seals, always check that:

- the nut and the seal surfaces are clean and undamaged and / or
- the elastomer sealing is clean and undamaged

### Determining the tightening torque for screw couplings

The included tightening torques apply under the following conditions:

- Steel couplings with VOSS coat surface coating
- The recommended tightening torques refer to steel threads with VOSS coat surface finish and a steel mating material with a breaking stress of 350 N/mm<sup>2</sup>. Steel threads with increased pressure level require a mating material with a breaking stress of  $\geq 600$  N/mm<sup>2</sup>.
- our recommendations on lubrication of the threaded studs are observed

If other values for strength, modulus of elasticity and friction-surface combinations are used, the user has to adapt the tightening torque empirically. The recommended tightening torques have to be adhered to if the pressure range is to be fully utilized and the appropriate safety level is to be maintained. The recommended tightening torques for the threads are given in the tables for the respective type of thread.

Tightening torques for VOSSForm<sup>SQR</sup> / VOSSForm<sup>SQR</sup> VA tube couplings

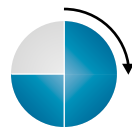

As an alternative to achieving pre-assembly and final assembly states by distance dependent assembly, the tightening torques can be applied directly.

The stated tightening torques are guideline values which have been determined under the following conditions:

- Tube specifications as given in the general notes.
- Surface coating of the coupling components is VOSS coat. The SQR function nut is additionally waxed.

Series	Tube OD [mm]	Before final assembly of the SQR function nut, hand tighten	Tightening torque Nm $\pm$ 5 %

S	16	130	330	
S	20	250	350	
S	25	400	700	
S	30	500	900	
S	38	800	900	

As an alternative to distance-dependent final assembly, torque-dependent assembly is also possible. The tightening torques are recommended values.

## Final assembly

Tighten union nut hand-tight.

Tighten union nut with a wrench until a noticeable force increase.

Continue tightening by approximately 1/2 turns (for L6 – L12, only approx. 1/4 turns).

## Tightening torques for blanking screws

Thread	Form	Tightening torque Nm -10 %
M 8 x1	N	10
M 10 x1	N	12
M 10 x1	V	12
M 12 x1.5	N	23
M 14 x1.5	N	30
M 14 x1.5	V	30
M 16 x1.5	N	50
M 18 x1.5	N	65
M 18 x1.5	V	65
M 20 x1.5	N	75
M 22 x1.5	N	90
M 24 x1.5	N	90
M 26 x1.5	N	110
M 27 x2	N	130
M 33 x2	N	225
M 33 x2	V	250
M 42 x2	N	310
M 42 x2	V	400
M 48 x2	N	380
M 48 x2	V	500

Thread	Form	Tightening torque Nm -10 %
G 1/8	N	12
G 1/4	N	25
G 3/8	N	50
G 1/2	N	70
G 3/4	N	120
G 1	N	200
G 1	V	250
G 1 1/4	N	320
G 1 1/4	V	400
G 1 1/2	N	400
G 1 1/2	V	500

### Caution!

The recommended tightening torques concern steel fittings with VOSS coat surface coating and a steel mating material with a tensile strength  $\geq 350 \text{ N/mm}^2$ . For other strength, elasticity module and friction coupling values the tightening torques have to be empirically adapted by the user.
